

# The Great Year/Yugas:

## A View of Cycles, Orbits and a Binary Sun

Ideas on The Great Year,  
the Mayan Calendar, the  
Orbit of New Minor Planet  
Sedna and a Binary Star to  
our Sun

Debbie Keil-Leavitt with  
Special Comments  
on the Yugas

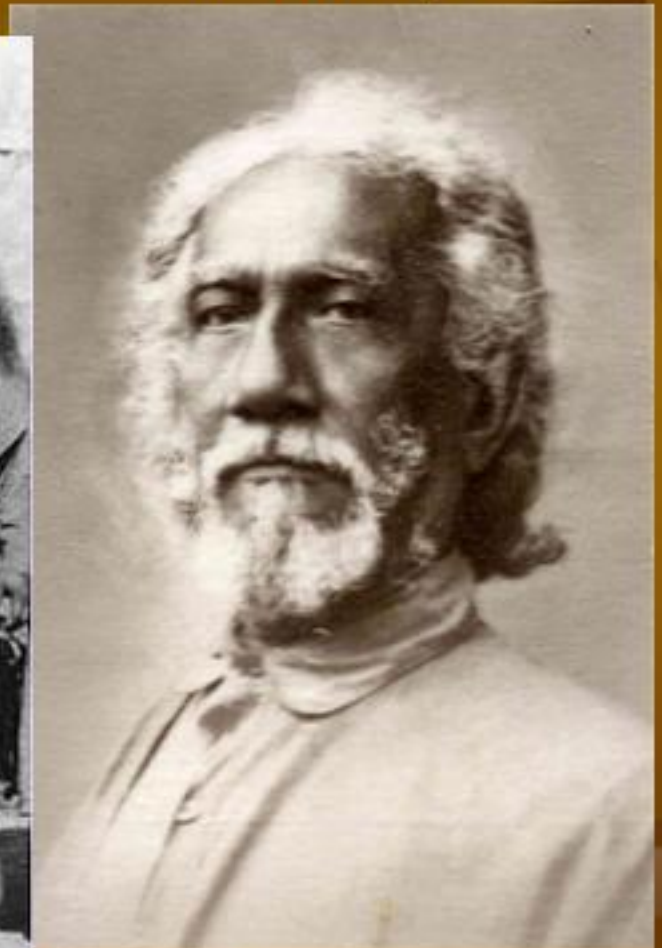

Dennis M. Harness, Ph.D.

# Paramahansa Yogananda and his Guru Sri Yukteshwar Giri

Paramhansa Yogananda is the Founder of the multi-cultural Self-Realization fellowship that brought East to West in Spirituality

Sri Yukteshwar Giri was a Jyotish (Vedic) Astrologer and Developed the Modern Yugas.

# Dr. Mike Brown

## Discoverer of Sedna

"The orbit of every single other object in the entire solar system can be explained, at least in principle, by some interaction with the known planets (and, again, for you Oort cloud sticklers out there, the known galactic environment). Sedna alone requires Something Else Out There.

"What is it? Seven years out, we still don't know. The hypothesized culprits have included passing stars, hidden planets, Oort cloud brown dwarfs, and, of course, Sumerian-inspired alien conspiracy theories. Whatever it is, it is bound to answer profound questions about the origin and evolution of the solar system, as well as inspire many new questions we had never known to ask."

# Sedna Appears to Orbit Our Sun Approx. Twice During the Period of a Yuga Cycle

Sedna was last this  
close to earth  
approx. 10000 BCE  
– Satya Yuga

22000 BCE approx.  
Sedna Would Have  
Been Closest to  
Earth, Like

Now, Dwapara  
Yuga

10,500-12,000 years is current Estimate of  
Orbit - lower end would be Double Mayan  
Long-Count Calendar, higher end would be Half  
of Yuga Cycle

Orbit of  
Sedna

# Sedna Mythology

Sedna's Myth—"...I'm amazed at all his words, soaring like the flight of birds, but the message they can bring is the flutter of a wing making ripples in an ocean, Where the Whales Have Ceased to Sing..." Bjorn Ulvacus

Sedna's myth is steeped in the harsh, yet beautiful world of the Inuit people of Northern Canada, Greenland, and other Polar areas.

She was the beautiful daughter of an Inuit man. She had denied all suitors which so angered her father that he said she deserved no better for a husband than his dog.

Later, a mysterious man came, promising Sedna a wonderful, abundant life. Once he had taken her to his island, he revealed himself to be a fulmar (bird) with no more than a nest for a home and nearly no food for nourishment. Her wails were carried to her father by a tern and, feeling remorse, he went to save his daughter.

But as they sailed away from the island in his kayak, the fulmar found them and created such a storm with his beating wings that her father threw her overboard to save himself.

She grabbed the edge of the kayak and he cut off her fingers to save himself. Her fingers became the sea mammals and she became the goddess at the bottom of the sea who controls the availability of these animals for Inuit hunters, allowing feast or famine. In times of famine, a shaman is sent to appease her by combing and braiding her hair, as she now has the flippers of a whale...

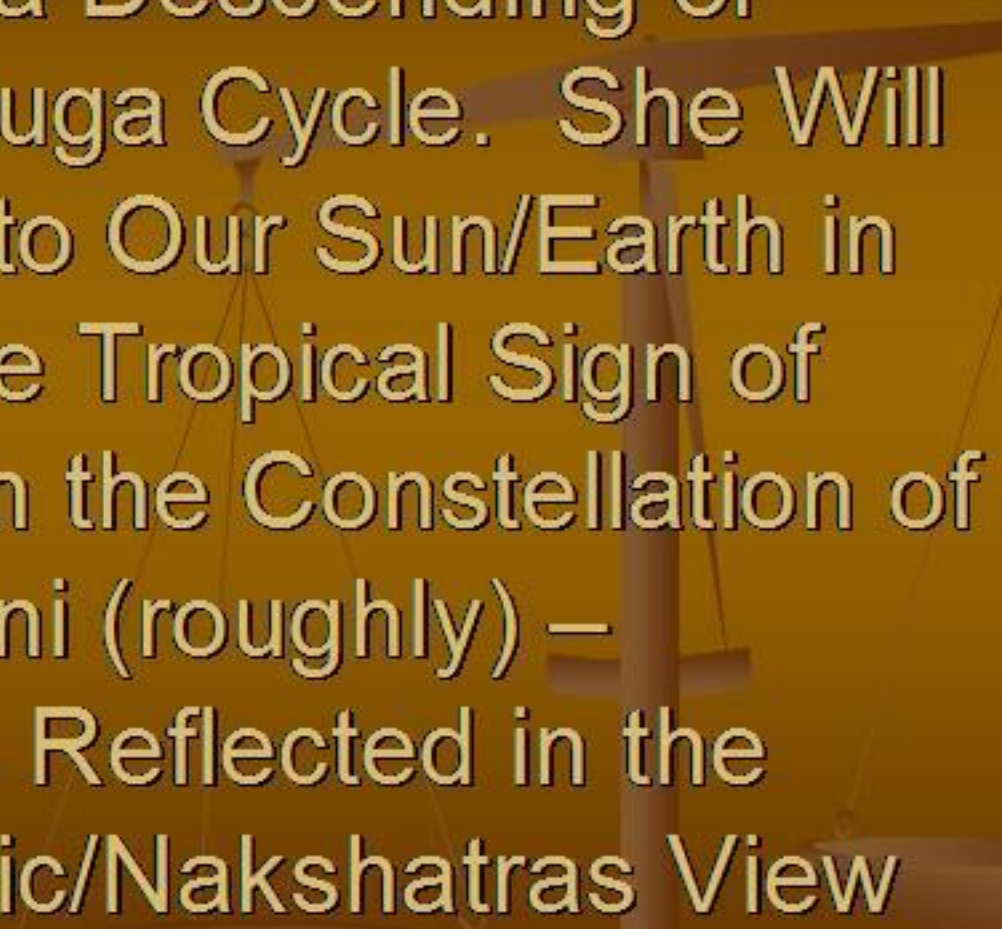

Sedna by Craig Clark

Coming Soon: Sedna Art by Susan Tower, [www.SusanTower.com](http://www.SusanTower.com)

Sedna's Orbit is Now Estimated  
Between 10,500 Years and 12,000  
years or a Descending or  
Ascending Yuga Cycle. She Will  
Be Closest to Our Sun/Earth in  
2083 in the Tropical Sign of  
Cancer, But in the Constellation of  
Gemini (roughly) –  
Which is Reflected in the  
Jyotish/Vedic/Nakshatras View

**"Incorruptible Winter Planet,  
Sunken Song"**

Forgive me if my eyes see no more clearly  
than sea foam,  
please forgive that  
my form grows outward  
without license and never stops:  
monotonous is my song, my word is a  
shadow bird, fauna of stone and sea,  
the grief of a winter planet, incorruptible.

Forgive me this sequence of water, of rock,  
of foam, of the tide's delirium:  
this is my loneliness: salt in sudden leaps  
against the walls of my secret being,  
in such a way that I am a part of winter,  
of the same flat expanse that repeats  
from bell to bell, in wave after wave,  
and from a silence like a woman's hair,  
a silence of seaweed, a sunken song."

The Sea and the Bells -  
Pablo Neruda
